

Grace Family,

The GLC COVID-19 Task Force has been working diligently to provide a detailed list of procedures that are to be followed at Grace when on the campus and inside of buildings. These procedures are designed to keep individuals on campus safe and (if during the weekdays) help with compliance of our day school procedures which is important for our licensing. GLC office staff will be ensuring these guidelines will be followed.

On Campus "To-Dos":

-Individuals must monitor their health before coming to the campus. You must be symptom free. Common symptoms are: Fever over 100.4, tiredness (fatigue), muscle pain, cough, loss of taste or smell, difficulty breathing, headache and sore throat.

-Face masks will be required for everyone outside or entering any building on the GLC campus. Masks should be worn over the nose and mouth, fitting properly without the need to readjust. People will be asked to leave the premises if they will not comply with this requirement.

-Individuals will be asked to wash hands for a length of 20 seconds or use hand sanitizer regularly while on campus.

-Individuals must avoid physical contact with others as much as possible while on campus, keeping with social distancing guidelines of 6ft or more.

If staff or congregant tests positive:

-Individual's identity will remain private upon the confirmation of COVID-19 diagnosis.

-Sick individuals must notify the GLC office if they become sick within 48 hours of being on the GLC campus.

-Infected individuals should not return to the church until they have met the CDC's criteria to discontinue home isolation or quarantine.

If staff or congregant are identified as a close contact to a COVID-19 positive person:

-Individuals should not return to church until they have met CDC's criteria to discontinue quarantine or home isolation.

Definitions:

COVID-19- A disease caused by a new strain of the coronavirus. 'CO' stands for corona, 'VI' for virus, and 'D' for disease; 19 refers to the year of origin, 2019.

Isolation- If/when you test positive for COVID-19 and try to not have contact with other people, except if you need to see a doctor. If you live with other people, you might try to find another place to stay. Or, you might use your own bedroom and bathroom. If you can't avoid being around other people you should wear a mask at all times. The mask should completely cover your nose and mouth. Isolation keeps sick people separate from healthy people for the duration of infectiousness, which is two days before onset and at least 10 days after onset of illness. Isolation can end when the 10 days have passed, and symptoms are improving, and the sick person has not had fever within the past 24 hours without using fever reducing medication.

Quarantine- If/when you are exposed to a person who has tested positive for COVID-19 and try not to have contact with other people, except if you need to see a doctor. If you live with other people, you might try to find another place to stay. Or, you might use your own bedroom and bathroom. If you can't avoid being around other people you should wear a mask at all times. The mask should completely cover your nose and mouth. You will need to do this for 14 days *even if you test negative for COVID-19*. Quarantine restricts movement and contact of healthy people who have been exposed. Quarantine lasts 14 days since the last contact with the person who is infected.
